ADDRESS

Melbourne, Victoria

LINKS

[LinkedIn](#)

[Projects](#)

SKILLS

Programming

Python, R, SQL, Swift, HTML, XML, JS, CSS

Machine Learning Algorithms

Regression, Classification, Clustering, Dimensionality Reduction

Data Visualization

Matplotlib, Seaborn, Plotly

Statistical Analysis

Statistical Modelling, Inferential Statistics, A/B Testing, Hypothesis Testing

Tools and Frameworks

TensorFlow, Scikit-learn, Pandas, NumPy, Jupyter, Git, RStudio

Other skills

Data Wrangling, Model Deployment

EDUCATION

Bachelor of Data Science

July 2022 - June 2025

RMIT University, Melbourne

ACHIEVEMENTS

Certificate of Recognition

STEM College Program BP340 2022,

GPA of 3.8

Certificate of Commendation

STEM College Program BP340 2023,

GPA of 3.8

CERTIFICATION

Microsoft Certified: Azure AI Fundamentals

January 2025

Microsoft

Apple Foundation Program

February 2024

RMIT University, Melbourne

Google Data Analytics Specialization

December 2023

Coursera, Google

SUMMARY

Final-year Data Science student at RMIT with expertise in machine learning and statistical modeling. Skilled at leveraging data-driven approaches to solve complex problems, supported by hands-on internship experience and strong academic performance. Actively seeking roles or internships in Data Science to apply and expand expertise in the field.

RELEVANT EXPERIENCE

Software Development Internship

Urban Waste, Victoria Government

December 2022 - February 2023

- Collaborated & Researched: Worked with cross-functional teams to identify ERP challenges and conducted research for 3 months to improve efficiency and compliance.
- Technical Contributions: Assisted in ERP system design and development, focusing on data integration and user experience.
- Documentation: Created user manuals and training materials for smooth system adoption.
- Monitoring & Skills: Managed post-implementation system monitoring and honed skills in Python, XML, and HTML.

Apple Foundation

RMIT University

December 2022 - February 2023

- Developed a fully functional iOS prototype called Chemica in a team of four as part of the Apple Foundation Program.
- The app can identify chemical hazard signs using image recognition, providing users with instant information about the symbol and safe storage guidelines.
- Integrated a user-friendly interface to improve accessibility for students and laboratory staff.
- Collaborated on all stages of development: ideation, design, coding (Swift), ML training and deployment, and testing, resulting in a working prototype showcased at program completion.

PROJECTS

LLM-based Detection of Privacy Issues in Stack

March - June 2025

Overflow

- Developed a working prototype leveraging Large Language Models (LLMs), such as GPT and DeepSeek, to automatically identify and analyze privacy violations in Stack Overflow posts, including questions, answers, and comments.
- Gained practical experience in Natural Language Processing (NLP), NLI, and integrating LLMs for real-world text classification and analysis tasks.
- Utilized Python and Stack Overflow APIs to collect and preprocess large-scale datasets, enabling automated detection and in-depth evaluation.
- Produced an end-to-end research workflow, including tool development, dataset construction, and performance evaluation with quantitative results.

AI-powered Chatbot Search Assistant

June - December 2024

- Developed a chatbot interface integrating a Large Language Model (LLM) with a structured knowledge base to assist users in finding relevant information efficiently.
- Designed and implemented user-friendly features to streamline natural language search and response workflows.
- Contributed to the end-to-end development process, focusing on enhancing usability and the overall user experience.
- Enabled dynamic, context-aware interactions by combining real-time LLM responses with curated organizational information.

NLP Web-based Data Application

September - October 2023

- Developed a job search and posting platform, integrated NLP Machine Learning models to classify job adverts for job category recommendations.
- Web Development: Built the front-end and back-end of the application with Flask.
